CE ■  
ATEX  
94/9/CE DIRECTIVE

- For over 50 years, Crouzet Control, has established a reputation for providing micro-control products, micro-motors and position sensors. Read on to discover Crouzet Control's complete offer of Pneumatic products for industrial and explosive atmospheres.
- Always one step ahead of market trends and customer requirements, Crouzet Control is continually developing its range of both standard and customised automation components and solutions to cover all the latest commercial and industrial applications and meet the needs expressed by manufacturers of automated equipment and machinery.
- Throughout the world, Crouzet Control the adaptation specialist provides you with technical and industrial expertise to ensure seamless integration, whatever the equipment environment or operating requirements of the machine.

- InnoVista Sensors™: your trusted partner of choice to face industrial challenges of today and tomorrow.

*InnoVista Sensors™ is a worldwide industrial specialist of sensors, controllers and actuators for automated systems.*

*Through its brands, Crouzet Aerospace, Crouzet Automation, Crouzet Control, Crouzet Motors, Crouzet Switches and Systron Donner Inertial, InnoVista Sensors™ offers a wide range of reliable, efficient and customizable components dedicated to the Aerospace & Defence, Transportation and Industrial market and segments.*

*Thanks to the recognized expertise of its teams and a strong innovation policy, InnoVista Sensors™ brings performance enhancing solutions to its customers worldwide.*

- Eco-design is central to the company's "Offer Creation Process", the aim of which is to design products and services that correspond as closely as possible to customers' requirements and reduce their environmental impact throughout their life cycle.
- Customer satisfaction will always be our prime objective.  
To this end, we rely on standards ISO 9001 and ISO14001 to ensure that our design, industrialisation, manufacturing and commercialisation processes correspond to our customers' requirements.

All Crouzet Control products are fully compliant with the RoHS directive

# ATEX Directive 94/9/EC: general information

## Principles of Directive 94/9/EC:

- The directive aims to harmonise the legislation of European Union member states in order to ensure free circulation of equipment intended for use in explosive atmospheres (gas and dust).
- Since 1 July 2003, this directive has applied to electrical, mechanical, hydraulic and pneumatic products.
- It concerns the assessment of protective devices and systems (manufacturers) as well as the design (design office), installation (installers, panel-builders) and maintenance (maintenance depts) of installations.

## Definition of an explosive atmosphere:

- An explosive atmosphere is defined as a mixture of flammable substances (in the form of gas, vapour, mist or dust) with air under atmospheric conditions in which, after ignition, combustion spreads throughout the entire unburned mixture.

## Application since 30 June 2003:

- Manufacturers must offer products, which comply with Directive 94/9/EC and must have a Quality Control System that has been approved by a notified body.
- Users are responsible for using equipment correctly according to the zones they have defined within their installations based on the potential risks. Existing installations must be brought into conformity with the ATEX Directive before 30 June 2006. All new products commissioned must comply with Directive 94/9/EC. In the event of breakdown, installed equipment that cannot be repaired must be replaced with equipment complying with Directive 94/9/EC.

## Classification:

- Potentially explosive environments are classified by zone in compliance with Directive 1999/92/EC. This directive is aimed at users. It details the minimum requirements for increasing protection of the health and safety of workers exposed to explosive atmospheres.
- ATEX Directive 94/9/EC defines categories of equipment and protection systems, which can be used in the corresponding zones.
  - ➔ Categories M1 and M2 relate to mines (group I)
  - ➔ Categories 1, 2 and 3 relate to other locations (group II) often referred to as "Surface industries"

## Documents and recommendations/products:

- ATEX-certified products must be supplied with an EC declaration of conformity and a user manual.
- At the time of sale, the sales representatives must check the zone in which the product is to be used. On the order, the customer must inform the manufacturer of the conditions of use.
- Manufacturers and distributors must ensure that their sales of ATEX products are traceable (so that customers who have been sold an ATEX product can be located in relation to the product's date of manufacture).
- In the case of an assembly, the product with the lowest certification level determines the level of the whole assembly.

## Some relevant areas:

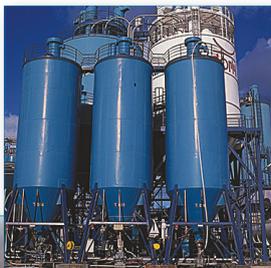

Water treatment

Chemical factories

Silos

Gas storage

Ports

- Refineries
- Paper industry
- Paint factories
- Vehicles (if used in ATEX conditions)

### Equipment definition:

#### Equipment for surface industry - Group II

Zone	0	20	1	21	2	22
Type of atmosphere G = Gas, D = Dust	G	D	G	D	G	D
Presence of Explosive atmosphere	Continuous presence (or for long periods, i.e. more than 1000 hours per year)		Intermittent presence (or occasional, i.e. 10 to 1000 hours per year)		Fleeting presence (or rare, i.e. 1 to 10 hours per year)	
Category of equipment that can be used as per 94/9/EC dated 23/03/94	1		2		3	

### Marking example:

Certified products must incorporate marking specific to Directive 94/9/EC, such as:

Crouzet Automatismes SAS  
 2 rue du Docteur Abel, 26902 Valence, FRANCE  
 Type: 81513530  
 Serial no:  
 Year of construction  
**CE 0081** Ⓢ II 1 G  
**Ex ia II C T6**  
**LCIE 02 ATEX 6121 X**  
**Max. amb. T: +50°C**

### Explanation of the marking example:

- ➔ The CE marking along with the identification number of the notified body responsible for monitoring the QCS (0081 = LCIE).

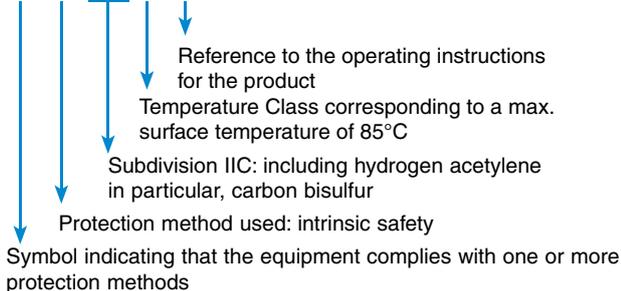

CE 0081 Ⓢ II 1 G

- ➔ The Ⓢ symbol indicating that this product can be used in an explosive atmosphere followed by the equipment group (II = Surface Industries), the category (1 = continuous presence; 2 = intermittent presence; 3 = fleeting presence), and the type of explosive atmosphere G = Gas, D = Dust.

In affixing this CE marking, the manufacturer declares that the product has been manufactured in complete conformity with the requirements of all the relevant directives.

- ➔ Next line of the marking specified by the harmonised standards:

Ex ia II C T6 X

- ➔ The CE-Type Examination Certificate reference (if appropriate).

LCIE 02 ATEX 6121 X  
 Max. amb. T: +50°C

- ➔ The ambient operating temperature range.

In the event of use in an explosive atmosphere caused by dust, the following items are added to the marking:

- ➔ The surface limit temperature T° C for use in an explosive atmosphere caused by dust.

- ➔ The IP rating (only for dust)

# To know

## Manual control valves

Manual control valves are deemed to be simple slow-moving components, without any hot surfaces, and are not subject to ATEX Directive 94/9/EC.

They can be integrated in devices and equipment conforming to the requirements of this directive without adversely affecting conformity.

Nonetheless, parts of these components made of polymer can have an electrostatic charge and the user must take account of these charges.

Weight	g	25

## Connections

Without flow restrictor

With flow restrictor

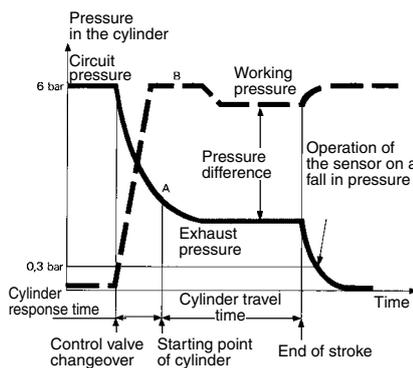

## Principle of operation

Fitted in-line between the cylinder and the control valve, the sensor will give an output when the pressure in this line is exhausted and the cylinder is at end of stroke.

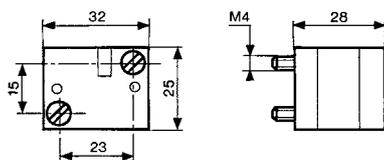

For the correct usage of sensors on a falling pressure, it is recommended that the practical cylinder load is limited to 60% of the theoretical force.

# Pressure switches - Amplifiers

The image is a technical collage for Crouzet pressure switches and amplifiers. It features several key elements:

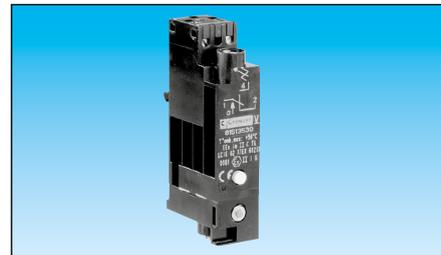

- Physical Components:** A vertical pressure switch (model 81513530) with technical specifications:  $T^{\circ} -10 \text{ a } +50^{\circ}\text{C}$ ,  $\text{EEEx ia IIC T6}$ , and  $\text{LCIE 99.C.6015X}$ . A horizontal 4-way valve and a pressure amplifier are also shown.
- Diagrams:** A schematic of a 4-way valve with ports 1, 2, 3, and 4. A pressure amplifier schematic shows input 1, output 3, and a control input 2. A pressure gauge diagram shows a scale from 0 to  $-1b$ .
- Background:** A blurred image of a person in a white lab coat, suggesting a laboratory or industrial setting.

## Electrical connection

# Pressure switch

## Important

This pressure switch must be connected to an approved safety barrier. Placed in a safe zone, this safety barrier can be used to supply the pressure switch in a hazardous zone.

- 1 = common
- 2 = NC contact closed
- 4 = NO contact open

The electrical connection between the safety barrier (or interface) and the pressure switch can be made using ordinary wires or cables.

The maximum voltage of the intrinsic safety power supply source should not exceed 60 V.

- $L_{int} \approx 0\text{ mH}$
- $C_{int} \approx 0\text{ }\mu\text{F}$

- $L_{int}$  = pressure switch inductance
- $C_{int}$  = pressure switch capacity

## Recommended barriers and interfaces

These safety interfaces and barriers, recommended by CROUZET, should be obtained from one of the manufacturers indicated below, specifying that they are to be used to supply power to intrinsic safety pressure switch Type 81 513, CE 0081 II 1 G, approval no. n° LCIE 02 ATEX 6121 X.

### For CROUZET intrinsically safe pressure switches

Barriers/Interface	Gas group	Part number	Manufacturer	Certificate
Barriers	IIC	MTL7787+	MTL	BASO1TEX7217
Barriers	IIC	BZC 24/50/1/A1	Georgin	O1ATEX6070X
Interface	IIC	RDN11	Georgin	O2ATEX6104X

**CAUTION:** If being used in zone 0 a system certificate supplied by an approved body must be obtained. In zones 1 and 2, the system integrity should be checked with a loop calculation; given that our product  $C = 0$ , cable  $C$  must be less than barrier  $C$ .

Weight	g	150	150	185	185

## Connections

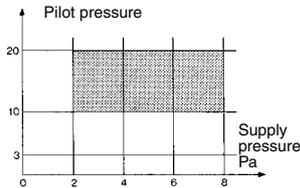

Used for gaps up to 25 mm.  
 The supply to the sensor should be made via a pressure regulator or one-way restrictor (see page 34).  
 Connection - sub-base see page 36-37).

## Principle of operation

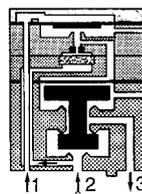

### Simple amplifier

An output at normal industrial pressure is delivered on a low pressure input.  
 NB: Hysteresis is 20% of the pilot pressure

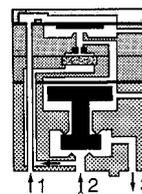

81 502 238

Positive output

81 505 231

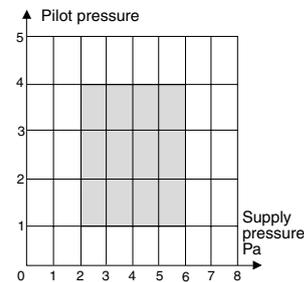

Negative output

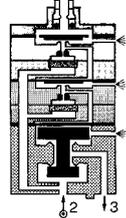

1 - pilot  
 2 - supply  
 3 - output

### Sensitive amplifier

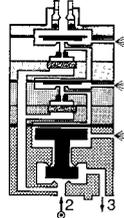

An output at normal industrial pressure is delivered on a very low pressure input.

81 502 322

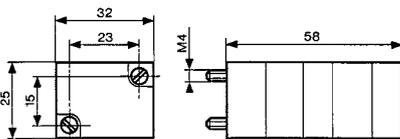

81 505 321

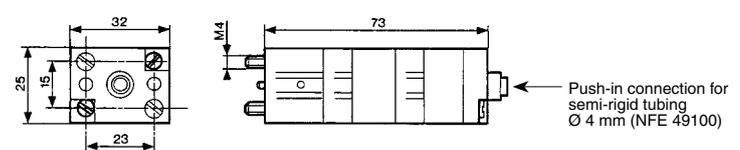

Note: The specifications are given for a supply pressure of 6 bars, and for detection at the mid-point of the gap.

## Dimensions

81 502 238 - 81 505 231

81 502 322 - 81 505 321

## Other information

With gap sensors, use an amplifier with negative output if you require a signal on interruption of the jet.

**Dimensions**

Push-in connection for semi-rigid tubing Ø 4 mm (NFE 49100)

# Pneumatic logic components

# General characteristics

### Operating fluid

- Compressed air or inert gas.

### Conditions of use

- Operating pressure 2 at 8 bars (except for special conditions).
- Fluid: Filtered air to 50 microns - non lubricated.
- Operating temperature from - 5° C to + 50° C (under + 5° C the dew point must be below 10° C for the application).
- For optimum performance, the elements should be inter-connected by air supply tubing with an internal diameter  $\geq$  at 2.5 mm.

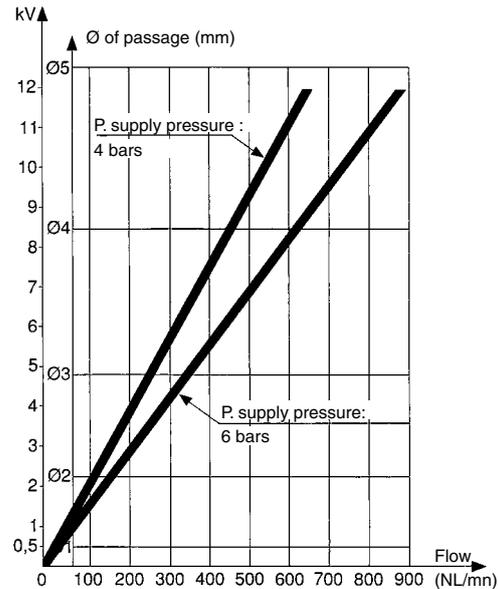

### Mounting recommendations

- The elements should be mounted and piped in a clean atmosphere in order to prevent any form of pollution entering the system.
- Minimum torque for element fixing screws: 5 cm/kg.
- maximum torque for element fixing screws: 10 cm/kg.

### Characteristics common to all elements in the modular system

- The characteristics have been obtained with a supply pressure at 6 bars.
- The flow in NI/min is the number of litres of air at normal atmospheric pressure obtained with the output open to atmosphere and the supply pressure at 4 bars
- The consumption in NI/min is the number of litres of free air necessary for the unit to function.
- kV = the flow coefficient of the equipment.
- Mechanical life > 10<sup>7</sup> operations.

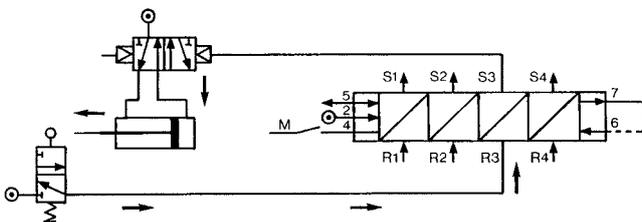

### flow graphs

### Sequencer modules

Operation results from the combination of a sequential cycle. A system comprises individual modules which are joined together by means of a sub-base. Each module has a memory which delivers an output signal and receives an input signal.

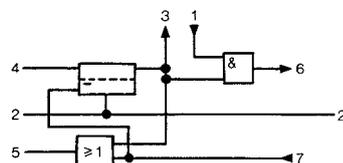

An indicator on each module allows the operator to monitor the progress of the cycle and identify quickly and easily any fault which may occur.

Operation results from the combination of three functions (memory, AND and OR) which constitute each module.

The memory activates the output and gives priority to the reset signal. The AND element ensures the transition to the next module but only if an input signal is present. The OR element ensures the resetting of all previously operated modules.

### Function diagram

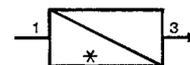

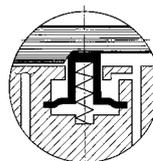

### sequencer module with maintained reset

#### Brake

This maintains the memory spool in position only when the supply is lost.

### Module with auto reset

#### Brake

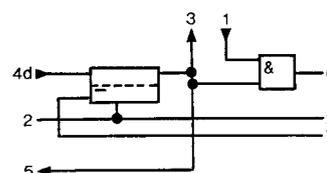

This returns the memory spool to the reset condition only when the supply is lost

#### Shift register

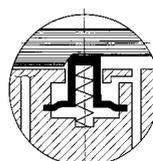

The general principle is to advance the sequencer step by command impulses to the inputs of the even steps, alternating with the command impulses to the inputs of the odd steps.

Used for example on a transfer machine to shift the information "bad component" collected at a test-test "n" steps further along the machine to a reject station.

### Pilot/pressure curves

Pp : Pilot pressure  
 Pa : Supply pressure

### Principle of operation

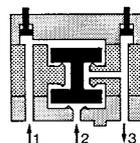

#### Cellule OR

The output signal "S" is present when a signal at "a" OR "b" is present:

$$S = a \text{ OR } b$$

$$S = a + b$$

#### Cellule AND

The output signal "S" is present only when signals "a" AND "b" are present simultaneously:

$$S = a \text{ AND } b$$

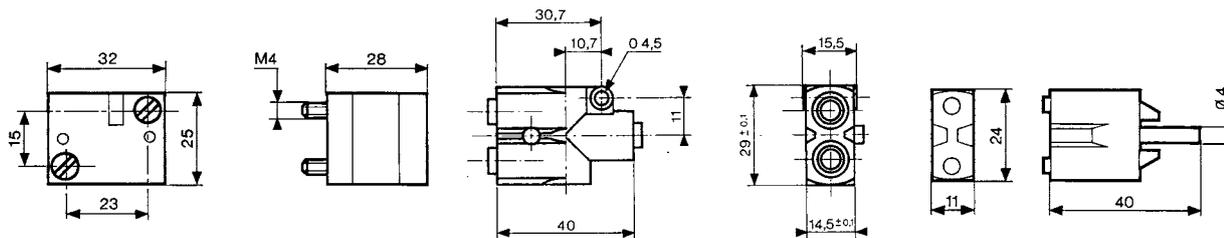

$$S = a \cdot b$$

13	25	30	30	30	30

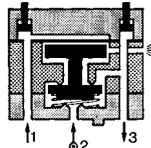

**YES element**

The output signal "S" is only present when the pilot is present "a" is present:

$S = a$  YES b

$S = a$

**NOT element**

The output signal "s" is present only if the input signal "a" is NOT present. The output signal is therefore the inverse of the pilot signal:

$S = \bar{a}$  NOT a

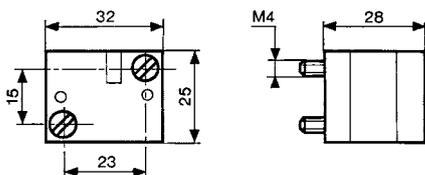

$S = \bar{a}$

If the supply port is connected to a 2nd input "b", the function obtained is called inhibition:

$S = \bar{a} \text{ AND } b$

$S = \bar{a} \cdot b$

Flow at 6 bars	NI/min	200	200
Connection - On sub-base page 36-37		●	●
Weight	g	90	90

## Principle of operation

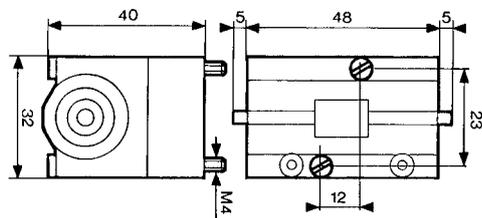

The function is that of a 4/2 valves. The appearance of signal "X1" causes the displacement of the slide valve. The output port "x" is then put under pressure. This state is remembered until the arrival of signal "X0". This signal reverses the slide valve, the output "x" is put under pressure. This state is likewise remembered. The output:

- "x" under pressure indicates that the information in the MEMORY is "X1",
- "x" under pressure indicates that the information in the MEMORY is "X0".

Memory element sub-base, front and rear connecting

Rear connection

- 1 - Input port X1 (green port 1)
- 2 - Input port X0 (green port 1)
- 3 - Output port X (red port 3)
- 4 - Output port X (red port 3)
- 5 - Supply port (brass port 2)
- 7 - 1/4 turn screws
- 8 - Input indicator
- 9 - Output indicator
- 10 - Marking tag
- 11 - Arrow indicating the flow direction

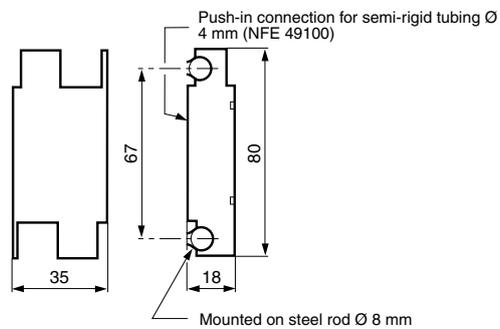

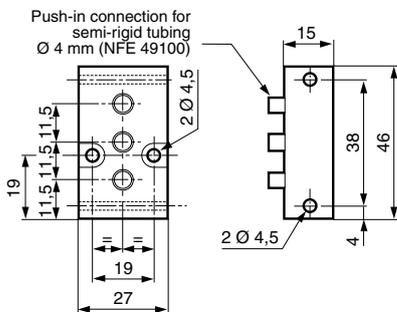

The modular system elements are fixed with two screws on the sub-base. A locating device on each logic element prevents incorrect assembly. The logic element is connected via the sub-base. This sub-base has 3 instant connections for connecting semi-rigid tubes with outer Ø 4.

- 1 - Input signal
- 2 - Signal port for passive logic elements, air supply for active logic elements.
- 3 - Output signal

## Dimensions

## 15 x 15 mm footprint

## Other information

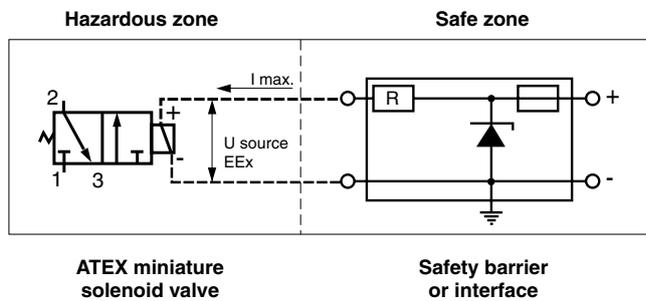

**Note:**  
Our IP20 miniature solenoid valves (except for those using wire connections) have a location-coding pin, which prevents them from being mounted on our standard sub-bases. They must only be used with the sub-bases mentioned on page 8 of this catalogue.  
If they are being installed with a separate electrical connector, only our 81 516 082 connector should be used in order to comply with safety level EEx ia II CT6.

## Miniature solenoid valves

### Important

These ATEX miniature solenoid valves must be connected individually to an approved safety barrier. Placed in a safe zone, these safety barriers can be used to supply ATEX miniature solenoid valves installed in a hazardous zone.

### Specifications for loop calculation

	12 Vdc	24 Vdc
	81519034 81519047	81519035 81519037 81519048
	81519334 81519347	81519335 81519348
	81519634 81519647	81519635 81519648
U source EEx	< 18 V	< 28 V
I <sub>max</sub> / coil	< 74 mA	< 37 mA
C <sub>int</sub>	0	0
R at + 20° C	147 Ohm+/-7 %	580 Ohm+/-7 %
R at - 10° C	> 119 Ohm	> 476 Ohm
R at + 50° C	< 174 Ohm	< 690 Ohm

U source EEx = intrinsically safe power source at the terminals of the miniature solenoid valve

I<sub>max</sub>/coil = maximum current through the coil

C<sub>int</sub> = internal capacity of the solenoid valve

R = internal resistance of the solenoid valve

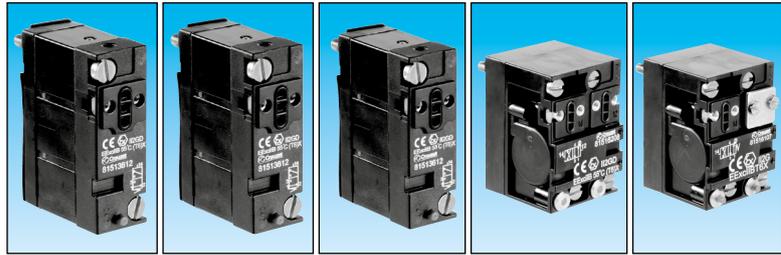

The electrical connection between the safety barrier (or interface) and the miniature solenoid valve can be made using ordinary wires or cables. The inductance of the connecting line between the safety barrier and the miniature solenoid valve must be less than 0.5 mH.

If mounted in a bank, this should consist of no more than four 81 516 107/208 products or no more than eight 81 513 196/234/612 products

# Sub and end bases for miniature solenoid valves and valve modules

**LCIE notification**  
no. LCIE 03 ATEX Q8002

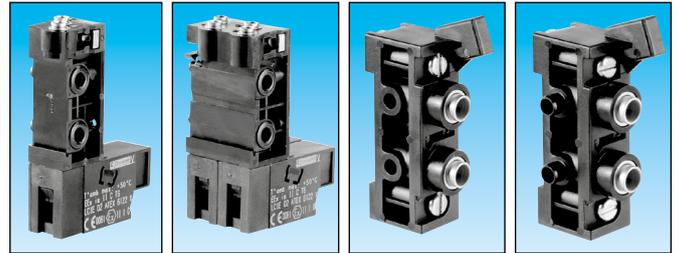

Sub-base for use with miniature solenoid valves conforming to **CE** type examination certificate LCIE 02 ATEX 6122X

FILE No. C.PN.HOM.00004.FR

INERIS No. 17564/04

for 81 513 040 and 81 513 039

**Equipment intended for use in potentially explosive atmospheres conforming to Directive 94/9/EC**

Type	17.5 sub-base	35 sub-base	17.5 end bases	17.5 intermediate supply module
Outer tube Ø	4 mm			
Width	6 mm			
Classification	CE II 1 G Ex ia II C T6		CE II 2 GD c II B T6X	

### Characteristics

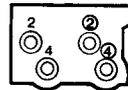

Permitted fluids	lubricated (ASTM2) or not	Air or inert gases		
Working pressure	(bars)	3 at 8		
Temperature	operating (°C)	- 10 at + 50		
	fluid (°C)	- 10 at + 30		
Sub-base fixing		Clips	Screws	
Fixing	on support using rail EN 50022 - 35 mm wide			
Construction	NBR, flame-retarded PA 66, brass			
Weight	(g)	55	110	86
Degree of protection		IP20		

### Connections

#### Pneumatic

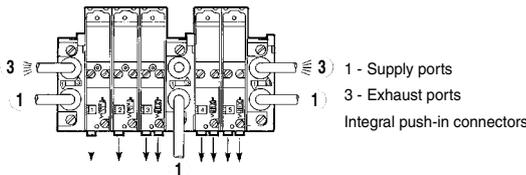

2 - Output active when de-energized for 3/2 NO or 4/2 17.5 mm  
4 - Output active when energized for 3/2 NC or 4/2 17.5 mm

② - Output active when de-energized for 4/2 35 mm  
④ - not used in this case

81 513 040 - 81 513 039

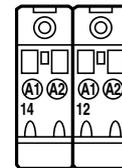

**Note:**  
Each sub-base can be fitted with:  
- 81 513 075-076 sub-base: one 3/2 or 4/2 valve, 17.5 mm wide  
- 81 517 106-206 sub-base: one 4/2 bistable valve, 35 mm wide or two 3/2 or 4/2 valves, 17.5 mm wide.

#### Electrical

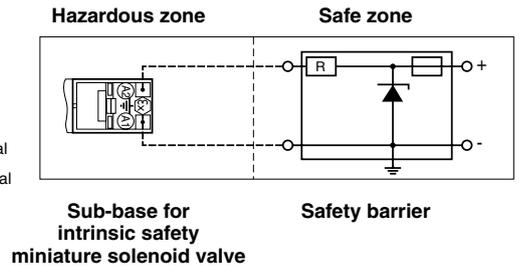

A1 - Control signal  
A2 - Common

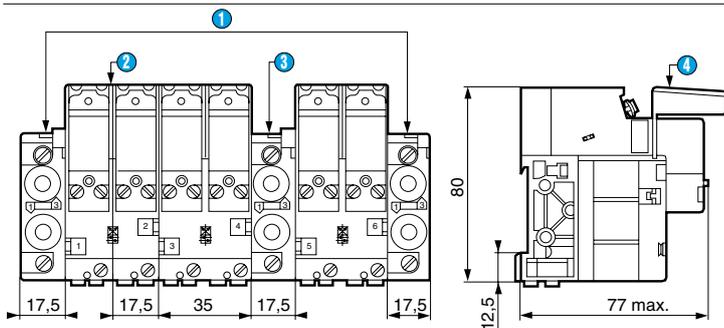

A1 - Operated control signal (14)  
A2 - Common  
A1 - Rest control signal (12)  
A2 - Common

These sub-bases must be connected individually to an approved safety barrier (see recommended barriers and interfaces page 7).
