## Principles

Double break snap-action switch with electrically separated circuits and with positive opening action on NC contacts (21-22) according to IEC 60947-5-1 Annex K

## Changeover - SPDT (form Zb)

Both circuits can be used at opposite polarities

## Curves

## Operating curve for category AC15 Operating curve for category DC13

(1) Number of operations
(2) Current in Amps
** For IP67 versions used in 125 V--- , please consult us.

* Models 83254 and 83255 are designed to operate equally well on low-current ( 1 mA 4 V minimum recommended) or medium current circuits. However, a given product should only be used to switch one type of circuit during its working life.

## Installation recommendations

See "Basic technical concepts"
To observe the required clearances and creepage distances in the connection area :

- above 125 V : an insulating plate is needed when the switch is mounted on an uninsulated surface.
- above 250 V : insulating plates are needed between switches when ganging.

## How to order

Use the 8 digit part numbers when they are defined
Other cases, precise: Type of microswitch - Degree of protection - Connection - Actuator* - Mounting accessories* - Adaptation* * if needed

Example: 83250 IP67 W3/90B LG PE
